

The Benefits of Digital Care Planning for Care Homes

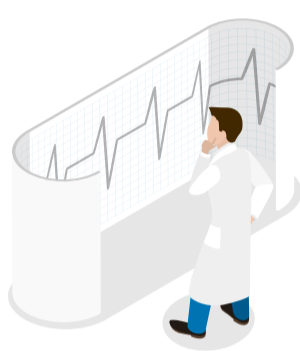

The right technology makes a huge and positive impact within the care sector. But not all digital care planning software is the same and it pays to do your **homework**. With the Government's plan for a digital health and social care network, all CQC registered providers will need the right system in place. But if you're still not convinced, here's the key ways that Karelnn's Digital Care Planning software can benefit your care business.

How Karelnn's digital care planning and management platform gives you more:

Improved management of your organisation: With on average 25% efficiency savings with the use of the system

Improved personalisation: With a trigger and response system for individual care planning

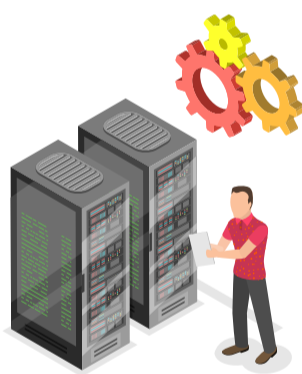

Increased detail within care records: By moving away from basket terms

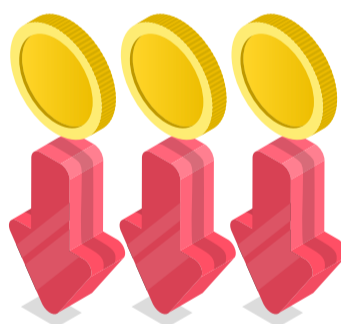

Easy and quick updates for staff: With Quick Tools such as dictation, saving on average 90 minutes for every care plan

Up-to-date reporting: Easily accessible and visible from across your organisation

Improved compliance standards With the planning software aligned to KLOEs

Reduced costs: By helping improve staff retention and recruitment, and staff working more effectively

Improved communication: For staff and relatives, through the family information portal

Easy to use system: Which is mobile-first and based on Facebook's look & feel, so it's familiar to staff

Karelnn is an innovative and proven platform for delivering digital transformation and efficient, effective care.

We are also an approved NHS supplier and can help you navigate grant funding applications from your ICS to help implement digital care planning.
